

Rentman 4G WooCommerce Plugin

User Manual, Version 4.4.2

08-05-2017

Installation process

- Go to the Wordpress Admin Panel and upload the ZIP file in the *plugins* screen. Alternatively, you can also manually unzip the ZIP file in the *wordpress/wp-content/plugins* folder onto the server.
- Activate the Rentman plugin.
- Navigate to *WooCommerce* -> *Rentman* in the Wordpress admin panel
- Submit your Rentman 4G login credentials to continue
- When your credentials have been approved, press the *Import Products* button to load all products from Rentman and their respective categories.

Managing your webshop

- Rentable products get a custom '*Rentable*' product type in WooCommerce. Customers who want to rent one of those products have to specify the rental dates on the product page before they can add it to the shopping cart.
- All other products imported from Rentman are saved as '*Simple*' products and they can be purchased without specifying a rental period.
- New customers who order Rentman products from your webshop will automatically be added to your Contacts in Rentman 4G.
- Orders made in your webshop will also automatically be added as Projects in your Rentman 4G account.
- When products have been changed, deleted or added in Rentman 4G, you can simply press the *Import Products* button again to update the products in WooCommerce as well.
- Press the *Reset* button to delete all Rentman products, images and categories from Wordpress.
- Press the *Update Images* button when you have added or updated any images in Rentman 4G to apply your changes to WooCommerce.
- Allow *Check availability for sending* in the settings to automatically make Wordpress check whether products are available in the selected time period.
- Allow *Use discount from contact in Rentman* to apply all kinds of discounts to products for specific customers.

Taxes and shipping

- The taxes for Rentman products are automatically obtained from your Rentman 4G account and included in the total price, so you don't have to enable taxes in WooCommerce or create any additional tax classes.
- However, you do have to create your own shipping methods, prices and classes in WooCommerce if you want to make use of them. The total price in the shopping cart will automatically be adjusted to your own settings for shipping costs.

Translations

- Available languages: Dutch, English (US)
- All translation files are stored in the '*lang*' folder of the plugin.
- Translations consist of *PO*-files and compiled *MO*-files.
- The text domain containing all strings that need to be translated is called '*rentalshop*'.
- We recommend to use a translation tool like *Poedit* to easily create new translations or edit the existing files.

Troubleshooting

- The plugin automatically checks for common errors on the plugin page.
- We have tested the plugin for Wordpress 4.0+ and WooCommerce 3.0+ Older versions might work but have not been tested.
- Firstly, make sure that the PHP execution time is set to the default value of 30 seconds (or higher). The plugin is not guaranteed to work correctly when the execution time is lower than 30 seconds.
- **The *import products* button doesn't do anything!**
 - Only products where 'In webshop' has been checked in Rentman 4G will be imported to your WooCommerce webshop.
 - Is this your first time using the Rentman 4G version of the plugin? Press the *reset* button first and try it again.
- **The product images are not displayed!**
 - Images are saved in: '*wordpress/wp-content/uploads/rentman*'
 - Are there any copy errors on the plugin page? Try to resolve them.
 - If there aren't any errors, make sure that the *.htaccess* file in the folder allows access from *all* or else the images will not be displayed properly.
 - If you do not have a *.htaccess* file there, you can simply copy the example '*.htaccess*' file located in the main plugin folder to the image folder specified above.

- **The product categories are wrong!**
 - If you manually delete the product categories that have been imported from Rentman, you will have to reset and re-import all products again to retrieve them.
 - Did you manually rename a product category in Rentman or Wordpress? This could possibly be problematic when you import any new or updated products. A simple reset will probably be sufficient, but contact us if you experience any major problems with this.
- **The availability check doesn't work!**
 - Make sure that you have allowed '*Check availability for sending*' in the main menu of the Rentman plugin.
 - Some Wordpress themes and plugins might not be compatible with our plugin. Turn off all other plugins and check if you still experience the same problems.
