Rentman 4G WooCommerce Plugin
User Manual
22-02-2017

Installation process
- Go to the Wordpress Admin Panel and upload the ZIP file in the *plugins* screen. Alternatively, you can also manually unzip the ZIP file in the *wordpress/wp-content/plugins* folder onto the server.
- Activate the Rentman plugin.
- Navigate to *WooCommerce -> Rentman* in the Wordpress admin panel
- Submit your Rentman 4G login credentials to continue
- When your credentials have been approved, press the *Import Products* button to load all products from Rentman and their respective categories.

Managing your webshop
- Available languages: Dutch, English (US)
- New customers who order Rentman products from your webshop will automatically be added to your Contacts in Rentman 4G.
- Orders made in your webshop will also automatically be added as Projects in your Rentman 4G account.
- When products have been changed, deleted or added in Rentman 4G, you can simply press the *Import Products* button again to update the products in WooCommerce as well.
- Press the *Reset* button to delete all Rentman products and categories from Wordpress.
- Allow *Check availability for sending* in the settings to automatically make Wordpress check whether products are available in the selected time period.
- Allow *Use discount from contact in Rentman* to add discounts to products for specific customers.

Troubleshooting
- Make sure that the PHP execution time is set to the default value of 30 seconds (or higher, but not much lower).
- Images are saved in: *'wordpress/wp-content/uploads/woocommerce_uploads'* Make sure that the .htaccess file in the folder allows access from *all* or else the images will not be displayed properly.
- If you manually delete the product categories that have been imported from Rentman, you will have to reset and re-import all products again to retrieve them.
